TABLE 1. Parameters used by fepCClkBias

Field Type	*Field Name*	*Description*
unsigned	`nrows`	Number of pixel rows between frame markers.
unsigned	`ncols`	Number of pixels per output node per row
fepQuadCode	`quadcode`	Output node configuration, i.e., ABCD, AC, or BD.
unsigned	`noclk`	Number of overclocks per row per output node
int	`bparm[1]`	=0 to use the Interated Mean algorithm, ***mean*** =1 to use the Fractile algorithm, ***fractile***
int	`bparm[2]`	For ***mean***, specifies σ rejection criterion. For ***fractile***, index of sorted pixel array.
