TABLE 1. Execute Back End Memory Command Packet

Req	Item	Description
1-1	Packet Length	Length of command packet in 16-bit words
1-2	Packet Identifier	Used to identify the command
1-3	Command Opcode	Execute_BEP_Memory_Command opcode
1-4	Virtual Address to Execute	32-bit Back End Processor Virtual Address to call. This address must be long word aligned (i.e. evenly divisible by 4). If not, the instrument will reject the command.
1-5	Arguments	The array of arguments to pass. The number of arguments to pass is determined by the Packet Length. The maximum number of 32-bit arguments that can be passed is 20.
