**TABLE 1. 'Data Filter' Operations**

| Function | Inputs | Outputs |
|---|---|---|
| Initialize | none | none |
| Reset Counters | none | Clears the filter's internal data acceptance and rejection counters |
| Get Reject Count | none | Returns the current value of the filter's data rejection counter. |
| Get Acceptance Count | none | Returns the current value of the filter's acceptance counter. |
| A subclass-specific Filter operation | Address of the specific subtype of "Pixel Array" handled by the filter | Returns whether or not to telemeter the passed data. If the data is to be rejected, it increments its internal rejection counter. If the data is to be accepted, it increments the internal acceptance counter. |
