TABLE 1. Add Patch Command Packet

Req	Field Name	Description
1-1	Packet Word Length	This indicates the total number of 16-bit words in the command packet
1-2	Packet Identifier	This identifies the command packet in a series.
1-3	Command Opcode	“Add Patch” command opcode. This instructs the ACIS software to add a patch to its list.
1-4	Patch Id	This identifies the patch within the patch list.
1-5	Virtual Address to Write To	32-bit Back End Processor Virtual Address to start writing to. This address must be long word aligned (i.e. evenly divisible by 4).
1-6	Data to Write	The array of 32-bit data values to write. The number of 32-bit words to write is determined by the Packet Length.
